

# Tribenuron-methyl

Tribenuron-methyl is a short persistence, sulfonylurea herbicide for the control of broad-leaved weeds in cereals. It is rapidly absorbed by the foliage and roots and translocated throughout the plant. Susceptible plants cease growth almost immediately after post-emergence treatment and are killed within 7 – 21 days. Tribenuron is often used in combination with other sulfonylureas.

- Action:**
- selective, systemic
  - post-emergence application (weeds)

**HRAC classification:** B

**CAS No.:** 106040-48-6

**Technical grade:** min. 95 %

**Formulations:** 75 WG

- Packaging<sup>1</sup>:**
- 25 kg (tech.)
  - 500, 250, 100 g cans (form.)

Crops	Weeds	Dose rate <sup>2</sup> g a.i./ha
Cereals	Wide range of annual and perennial broad-leaved weeds	20 – 30

<sup>1</sup>upon request we provide customized packaging  
<sup>2</sup>always follow national label recommendations
